

PPG SIGMACOVER™ 350

Versatile epoxy primer/finish delivers superior protection

Simplify your inventory with our dual-use coating that delivers long-lasting protection for a variety of above-water surfaces.

PPG SIGMACOVER™ 350

Versatile epoxy primer/finish delivers superior protection

Versatile primer/finish that protects in the harshest environments

We produced the PPG SIGMACOVER™ 350 coating to withstand the rigors of working at sea. Not only does it protect against the elements, it has been designed to keep maintenance projects straightforward, so your vessels spend less time in the dock and more time working for your business.

Our two pack epoxy primer/finish coat protects decks, interiors, superstructures, topsides and dry cargo holds. It can be used on new-build projects and has specially built-in properties that also make it the perfect solution for maintenance jobs on the go.

It's fast-curing, meaning it can be applied during any season and will deliver results throughout the year.

The PPG SIGMACOVER 350 primer/finish coating also keeps your cargo safe from harm, holding independent certification for the carriage of dry foodstuffs. Free of aluminum, it can also be used in areas which transport paper and other forestry products.

A great-looking finish

We understand that when representing your organization, your vessels should present a strong image.

Our products don't just work hard, they look great, too. PPG SIGMACOVER 350 is available in our full extended color range.

And because our palettes are standardized around the world, you can find a perfect color match at any of the centers within our global network. Wherever you are, you're never far from a fresh supply of our coatings to keep your vessel looking its best.

Even after initial application, the glossy finish provides an easy-clean surface ensuring a striking visual impact for longer.

Long-lasting benefits

PPG SIGMACOVER 350 is easy to apply and straightforward to maintain, in the dock or at sea.

Exceptional surface tolerance means you'll see the same excellent results, even when it's applied to less than optimal surfaces. Whether the vessel is rusty, aged or has little pre-treatment work undertaken, we have designed the PPG SIGMACOVER 350 primer/finish to ensure good adhesion and superior performance.

The combination of primer and finisher into one product makes application easier, and because it covers a wide range of above-water uses, there's no need to stock and handle a variety of products. Keep your inventory simple, save space and reduce the volume of administrative work involved.

In addition, it's compatible with existing aged coatings and there's no induction time, so you can start painting jobs sooner, and it's quick-drying, so your vessel will be back in service even faster.

From ease of application to less demand for complex inventories, the PPG SIGMACOVER 350 primer/finish delivers time and cost savings throughout.

This product is also fully supported by our PPG SIGMACARE onboard maintenance crew support pack, which provides training and advice on the application and lifting the standards of ship onboard maintenance.
